com. To assist those who understand the audio of the English language or whatever language, this is a simplified tutorial on how to recognize the voice of a person speaking, it can be on a phone or a laptop. You can then record the voice of a specific person. Facebook Texting continues to show improvement and this year, we see a welcome change of the business model of the social network. Up to now, Facebook only provided this feature for non-commercial uses but this year, the latter requirement is removed and this means that more and more businesses will use this tool. You can find more than 1000 000 accounts on Facebook that are used to send personal messages. To avoid spam and private messages, you have to use another software to send personal messages or to recognize the voice of the person. Cloud service is known as “on-demand computing”, but it goes a step further. Data is stored online and you access it from anywhere. The software are stored online, protected with a password, so you can store them on your home PC, your smartphone, your laptop, and even on a USB stick or a pen drive. You do not worry about losing your data if your device is stolen or lost. Nowadays, data are stored by different providers such as Google Drive, Dropbox, or even by companies such as Microsoft and Apple. Data are stored online, you do not worry about losing them. You can add more disk space whenever you wish. Smartphones have become indispensable these last few years. To be more precise, since I started using mobile phones when I was around 25, I have used, from time to time, one or two models such as the iPhone or the Android. However, in general, the smartphones I have known the last few years have been a bit different than the ones I use today. I would define them as “smart”, but this is a little more complex than it seems at first glance. The integration of the computer and mobile phone in a single piece of equipment is the result of an evolution. Some years ago, smart, or computer-like, phones were rare. Nowadays, this seems to have evolved into a movement that many manufacturers would love to see die. To understand what I mean, take a look at this example : the HTC Tappy (2015) In this computer, we can use a variety of applications, including a very limited office and an operating system. We can also install games or any software we wish to 82157476af
